EDUCATION

Bachelor of Science in Informatics, Concentration: Data Science

Seattle, WA

University of Washington

June 2026

Annual Dean's List (2022 – 2025)

Cumulative GPA: 3.79/ 4.0

Relevant Coursework: Database Design & Management | Data Structure & Algorithms | Search & Recommendation Systems | Machine Learning | Artificial Intelligence | Text Mining | Server-Side Development | Software Architecture

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, HTML/CSS

AI & Backend: LLM API Integration, Prompt Engineering, Structured Outputs, REST APIs, WebSockets, Authentication, Supabase, MongoDB, Firebase

Frameworks & Tools: React, Anthropic Claude, Grok API, RxNav/DailyMed, Photon SDK, Puppeteer, Git, Render

RESEARCH EXPERIENCE

Research Assistant

Seattle, WA

Social Media Algorithms (X Community Notes)

Sep 2025 - May 2026

- Integrated the Grok API with X's Community Notes generation codebase to simulate AI responses to human revision suggestions
- Built memory-efficient Python pipelines processing 50K notes, 4.0M+ ratings, and 4,715 note-version pairs for large-scale human-AI interaction analysis
- Developed an LLM-assisted evaluation pipeline using clustering, topic prediction, and structured annotation to analyze feedback and revision behavior

RELEVANT EXPERIENCE

AI Engineer / ML & Backend Developer

Seattle, WA

Token Tots (AI Healthcare Assistant on iMessage)

Jan 2026 – Jun 2026

- Built an iMessage-based AI assistant that converts prescription documents and user input into medication reminders, safety guidance, and personalized meal plans
- Developed TypeScript workflows integrating Anthropic Claude, Photon SDK, Supabase, RxNav/DailyMed, and Puppeteer for structured extraction, schedule generation, and PDF delivery
- Designed logic that normalizes dosage, frequency, duration, and meal-timing instructions into context-aware reminder schedules while accounting for healthcare privacy and safety constraints
- Translated usability feedback and healthcare constraints into product changes, including redesigned conversation flows, loading feedback, and clearer AI-generated outputs

Project Lead & Full-Stack Developer

Seattle, WA

Study Buddy (Real-Time Student Matching Platform)

Oct 2025 - Dec 2025

- Led 4 person team building a full-stack platform with authentication, user profiles, chat, and invitations
- Implemented real-time messaging with WebSockets, persistent chat storage, secure session middleware, and authenticated application flows
- Coordinated feature planning, backend integration, testing, and debugging across a four-person team to deliver the application on schedule

Front-End Web Developer / Front-End Lead

Seattle, WA

Plate Pal

Jun 2024 - Aug 2024

- Built a responsive React application that generates meal plans based on calorie goals, allergies, dietary preferences
- Developed reusable, state-driven components and integrated Firebase Realtime Database to persist profiles, preferences, meal histories, and favorites

WORK EXPERIENCE

Teaching Assistant, INFO 474: Interactive Information Visualization

Seattle, WA

University of Washington, iSchool

Mar 2026 - Jun 2026

- Debugged student projects built with Tableau, Tableau Prep, and Excel, providing guidance on data validation, transformation workflows, dashboard functionality, and visualization design
